Case Study: Analyzing 2024
Performance to Drive a Successful
2026 Relaunch

Created by: Sakshi Kamble

Problem Statement

- CEVO Pharma launched its asthma drug *BreatheEZ* in 2024 with the goal of achieving strong market adoption in India.
- However, despite significant investment in marketing and sales activities, the drug failed to generate expected revenue and resulted in substantial financial losses.
- The company now aims to relaunch the drug in 2026 and requires a data-driven strategy to improve performance and profitability.

Objectives

- The project/ case study aims to answer the following business questions:
 1. Why did the drug fail to achieve expected sales in 2024?
 2. Which regions and cities should be targeted for the 2026 relaunch?
 3. Which doctor specializations should be prioritized?
 4. Should the pricing strategy be revised?
 5. Which marketing channels should receive more investment?

CEVO's drug price is consistently higher than competitor pricing across all regions, which may have reduced customer adoption and overall sales.

Key Analysis

Avg of Price_per_unit VS Avg Competitor_Price

Avg Marketing_Spend according to Marketing_Channel in each Region

A significant portion of marketing spend was allocated to channels like medical conferences, which did not generate proportional returns.

Key Analysis

Pulmonologists contribute the highest share of prescriptions, indicating that targeting the right doctor segment is critical for improving sales.

The South region underperformed compared to others, indicating a need for improved market penetration and targeted strategies.

Percentage of Units_Sold to Doctors

Percentage of Revenue generated by each Region

Recommendations

Align pricing closer to competitors (~\$19 to ~\$20) to improve adoption and market competitiveness.

Focus on high-performing channels such as webinars and sales visits, and reduce investment in low ROI channels like medical conferences.

Increase focus on underperforming regions like the South through targeted campaigns and improved sales coverage.

Build stronger relationships with top hospitals and replicate successful strategies across similar institutions.

CEVO should prioritize engagement with pulmonologists and allergists through targeted marketing and personalized outreach strategies.

Conclusion

- The 2024 launch underperformed due to high pricing, inefficient marketing spend, and uneven regional performance.
- By optimizing pricing, focusing on high-impact marketing channels, and targeting key doctor segments, CEVO can significantly improve adoption and achieve a successful 2026 relaunch.
